**Project promoter**

Municipality of Central Corfu and Diapontia Islands

**Sectors**

RES, Ports, Energy community

**Project value**

3,340,000 €

The project envisages to fully serve the electricity demand of Othonoi and Ereikoussa, making them the first Greek islands powered by 100% renewables.

What is the project about?

- The project foresees the full decarbonization of Ereikoussa and Othonoi islands’ power systems, which are not interconnected with the mainland. The existing diesel-based power stations will be replaced by hybrid power stations combining a wind turbine, a photovoltaic station and a battery system.
- It also includes the transformation of the port of Mathraki island into a smart marina, including the creation of an Energy Community.

How will the EU Islands Facility NESOI support the project?

- Identification of suitable technological options given existing project sizing requirements
- Definition of the required environmental permitting procedures
- Cost-Benefit, socioeconomic and environmental analysis
- Identification of the preferred option and corresponding definition of project inputs
- Risk analysis and identification of available mitigation strategies
- Assessment of existing procurement options
- Financial modelling and identification of target scenario
- Identification of financing/funding options
- Action plan and identification of project monitoring procedures

NESOI has received funding from the European Union’s Horizon 2020 research and innovation programme under grant agreement N° 864266.
