

EUROPEAN ISLANDS FACILITY

*“ The project aims to build a tender which will be an instrument securing the purchase of high-quality goods, looking at the quality as prior to the lowest price ”*

The EU Islands Facility NESOI is pleased to introduce the clean energy projects receiving its support:

# SOLAR ISLAND TENDER

Preparation of tender documentation for a large non-integrated photovoltaic power plant on the islands

## What is the project about?

- The aim of the project is to prepare procurement documentation and implement procurement for the solar power plant Barabičn, near Baška, on the island of Krk.
- The project will enable design of tendering criteria based on economically best offer, changing the current system where prices are the only criterion.
- One of the project goals is to elaborate a development model for other municipalities, to facilitate the implementation of similar projects and translation of financing methods to other energy islands, offering an example of community project.

## How will the EU Islands Facility NESOI support the project?

- Analysis of the existing documentation and legislation for conducting the public tender
- Preparation of technical parameters for the solar plant (engineering task)
- Legal analysis and formulation of requirements (legal support)
- Publication of a public tender
- Evaluation of received applications
- Resolving possible complaints
- Developing a standard model for tendering documentation
